May 02, 2018

Hi all,

The document, *Integrated Data as a Foundation of SE*, is in its final review cycle. Over the last 2 years it has went through at least 4 previous reviews both internally to the Requirement Working Group and externally.

The document is very broad in coverage, crosscutting across multiple working group's areas of interest. Because of this, it is important to make the document available for review and comment by all relevant stakeholders. To this end, the document is being made available for review via the MBSE wiki.

Anyone, who intends to review and provide comments needs to inform me of the fact via email: louw@reqexperts.com   The goal is to be able to incorporate the comments and submit a final copy to Tech Ops in early June and be able to release the baselined document in time for IS 2018. I know this is ambitious, but we can only try. I**n order for this to happen, I need to receive your comments by May 18.**   If you need a little extra time, let me know.

Note that a key goal of this document is to provide an integrated context of the various perspectives of MBSE and a foundation which can be built upon and expanded on by the various INCOSE Working Groups. If, as a result of the work done by another WG, there is a need to update this document, then that working group can submit their suggested changes and they will be reviewed and incorporated in a subsequent release.

To this end, please use the comment form included in this folder to document your comments. Also, please clearly state the issue and rationale why the item you are commenting on is an issue. For each issue, provide specific changes to existing text or recommended new or additional text. Open ended comments or questions, in general, will not be addressed for this version.

When you save this form with your comments please replace the "xxx" in the file name with your initials.

Thanks!

Louis S. Wheatcraft
