Digital Thread

“Digitalization” accelerates change & innovation

"The enterprise that does not

innovate

inevitably ages and declines.
And in a period of rapid
change such as the present...
the decline will be fast."

-Peter F. Drucker

“Digitalization is the main reason just over half of the companies in the Fortune 500 have disappeared from the list since 2000.”

Pierre Nanterme, CEO Accenture, World Economic Forum

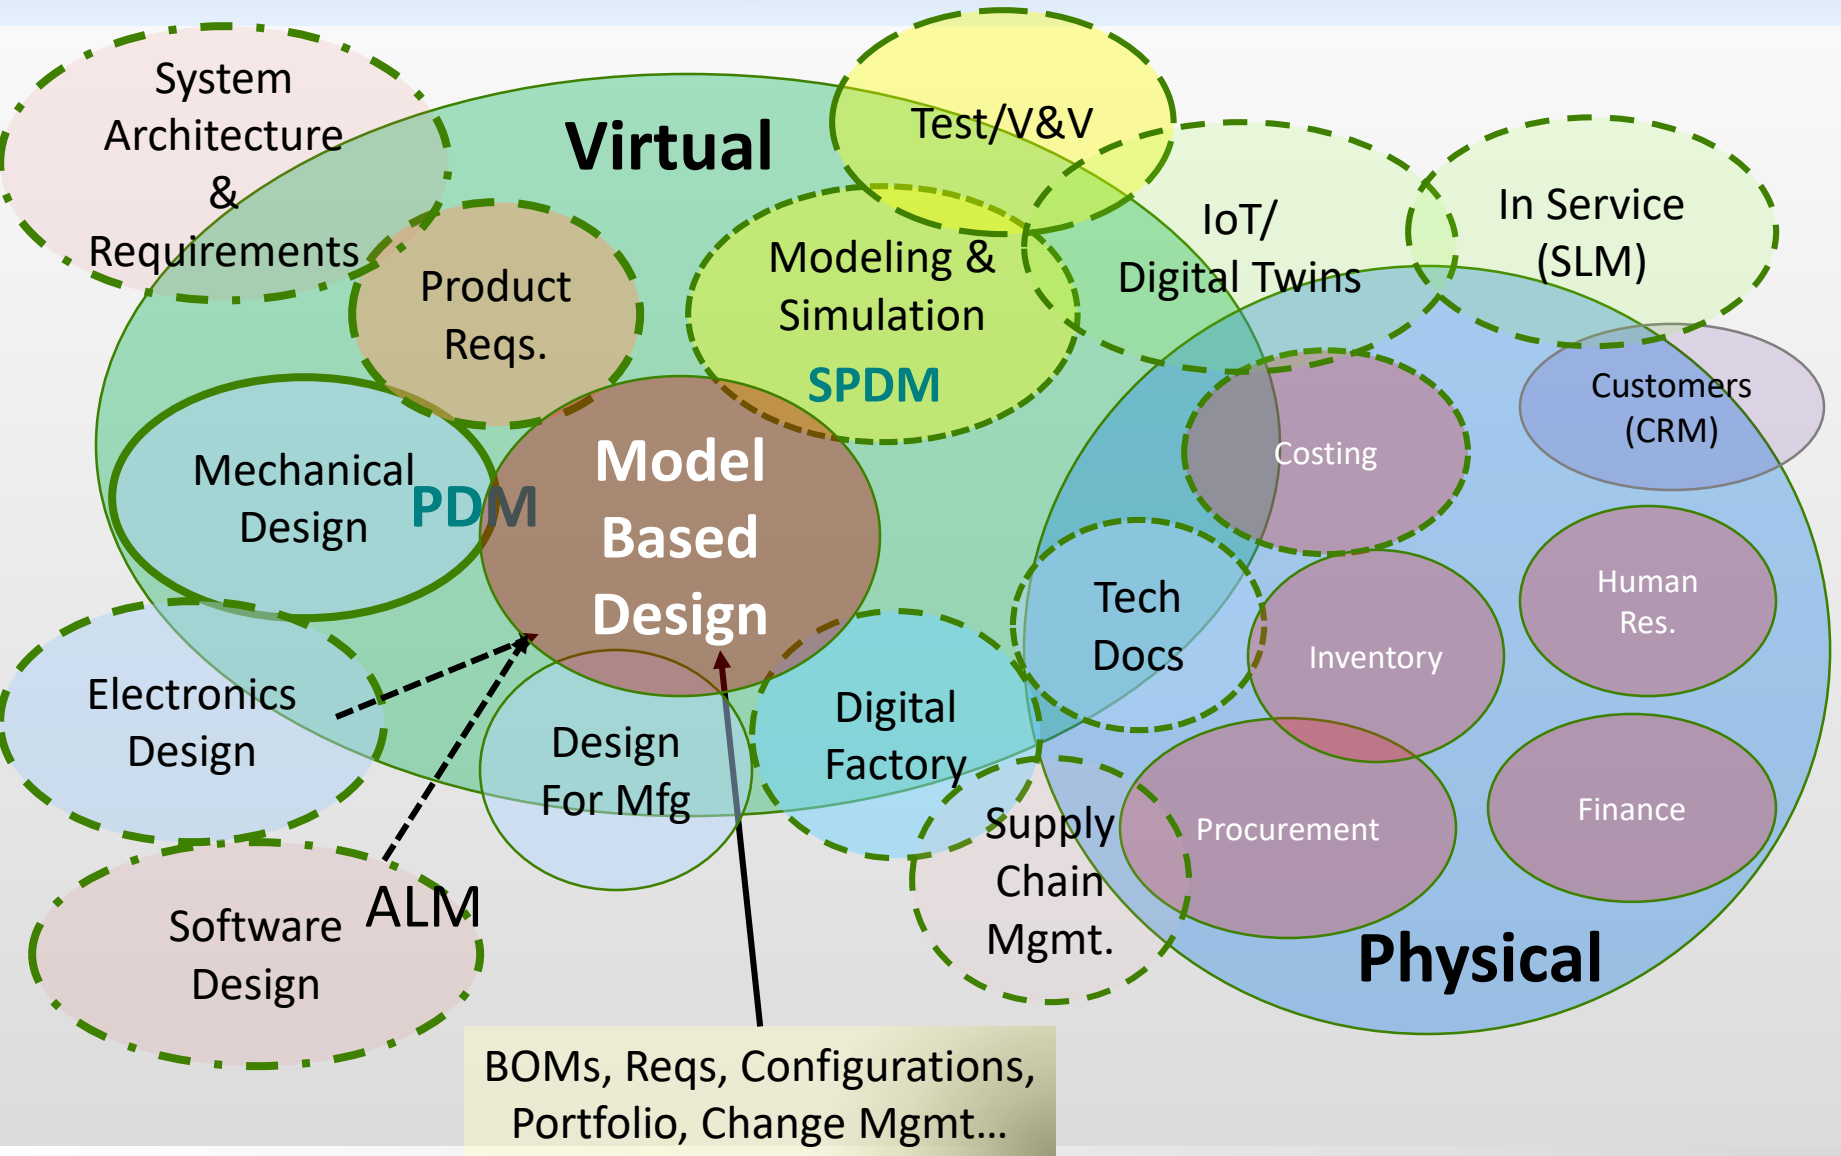

The Complexity Issue cuts across Industries

Relationship of Digital Initiatives (“As Is”)

Key domains in model-based are typically managed partially or totally in silos today

Digitalization is Driving Major Product Development Trends

Bringing together digital initiatives across the entire lifecycle of systems

- Product Innovation Platforms

Simulation increasingly relevant throughout the product lifecycle to enable innovation, quality and profitability

- Modeling & Simulation Platforms

Open Platform with 'best of breed' solutions is critical for delivering simulation value across the product lifecycle

- Model-Based Systems Engineering

Connecting VOC/requirements with systems level design, modeling and simulation across all engineering domains

- Digital Thread & Digital Twins

IoT & data analytics technology creating new insights and use cases for simulation models in operations

- Democratization of Modeling & Simulation

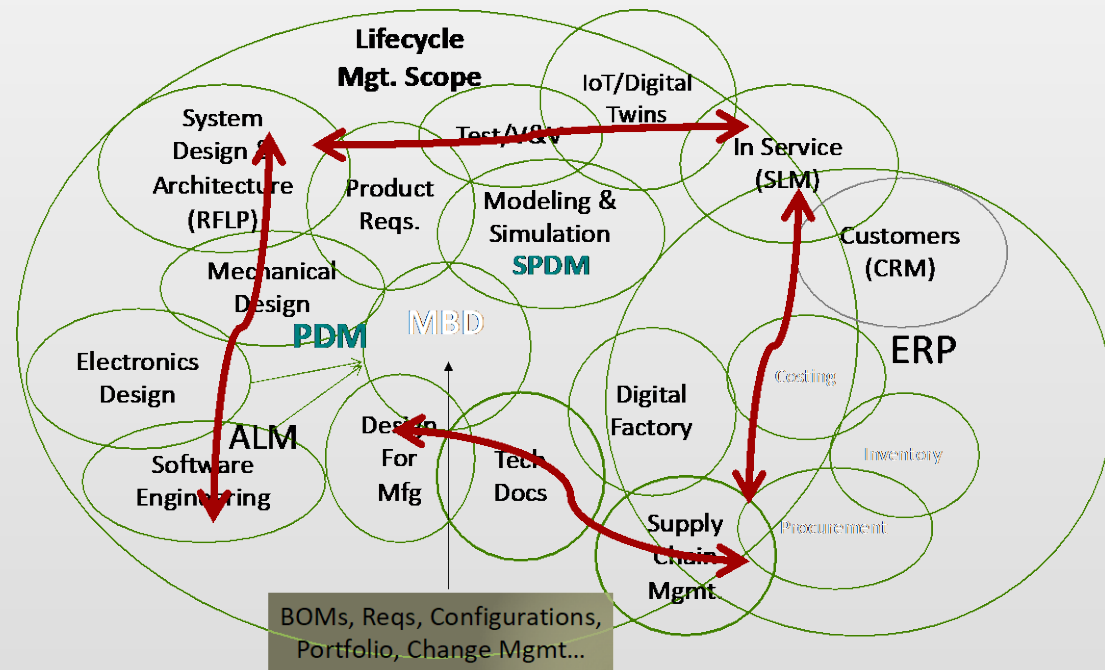

Technological advances enabling simulation use by more engineers earlier and throughout the product lifecycle

Digital Thread

CIMdata's preferred definition

- **Digital Thread** refers to the communication framework that allows a **connected data flow** and an **integrated view** of a physical asset's digital data (i.e., its Digital Twin) throughout its lifecycle cutting across traditionally siloed functions

Digital thread is enabled and supported by a robust end-to-end and connected systems model and related MBx processes

PLM: The Required End-to-End Connectivity

PLM touches all phases of a product's life—digitalization demands it

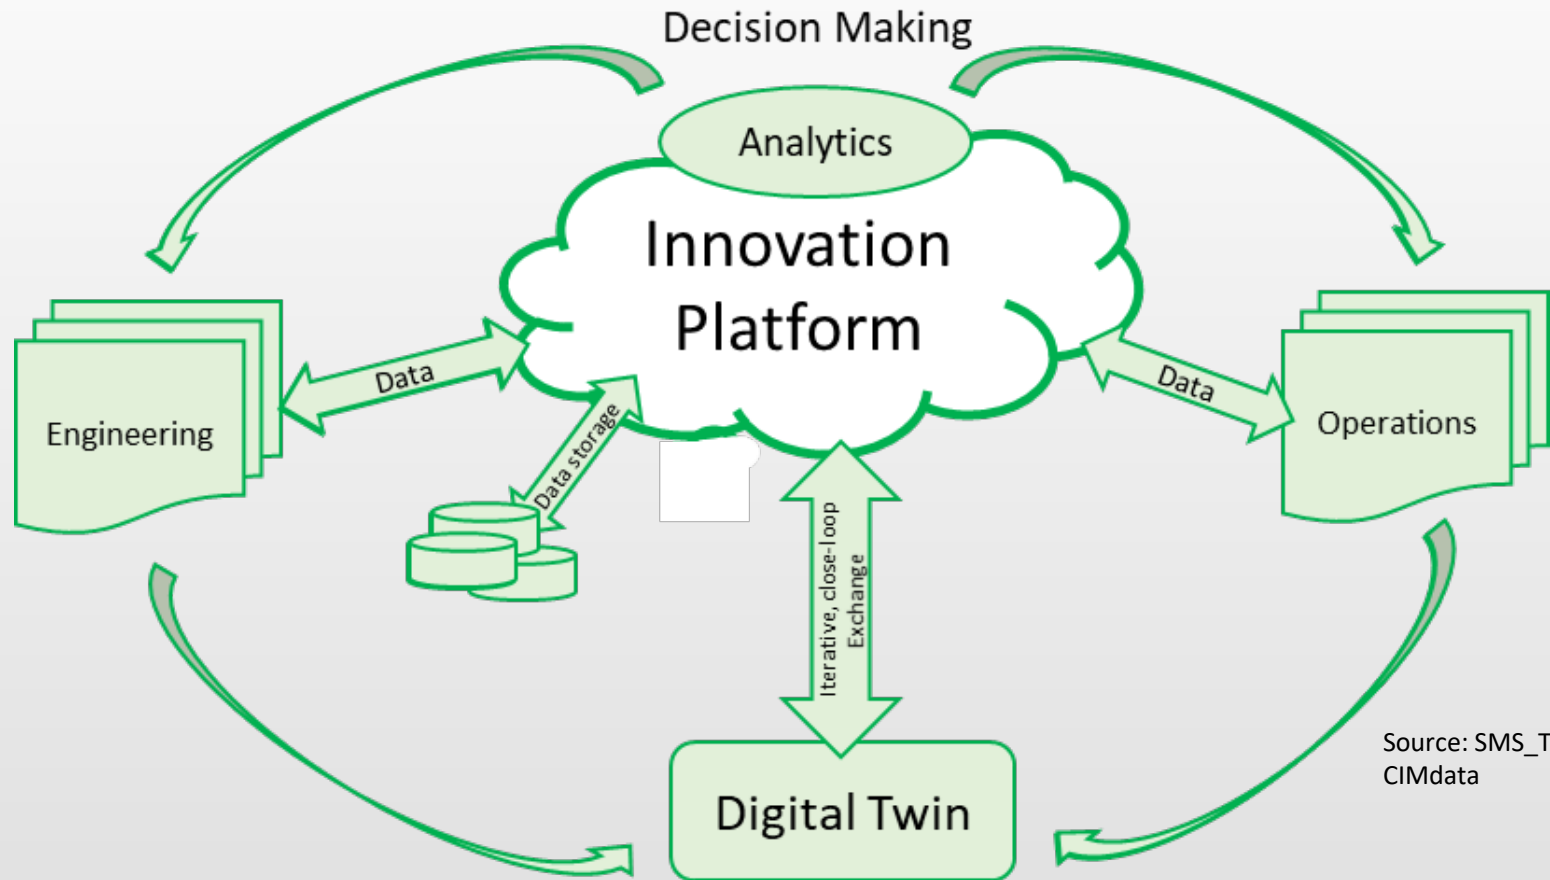

PLM Solutions—Information Management across Media, Process, Time, Geography, & Enterprise

The Emergence of the Digital Platform

Platformization: The next evolution of PLM, required to support digitalization

Source: SMS_ThinkTank™, CIMdata

Typically, there are several platforms involved to realize all the benefits of having a Digital Twin available. The underlying Product Innovation Platform needs to be able to bring the threads of all those platforms together to ensure that data and information is consistent and not duplicated.

Platforms are now consolidating across domains

Leading vendors acquiring MBSE, ALM, EDA & IoT technologies

CIMdata PLM Market Forecasts

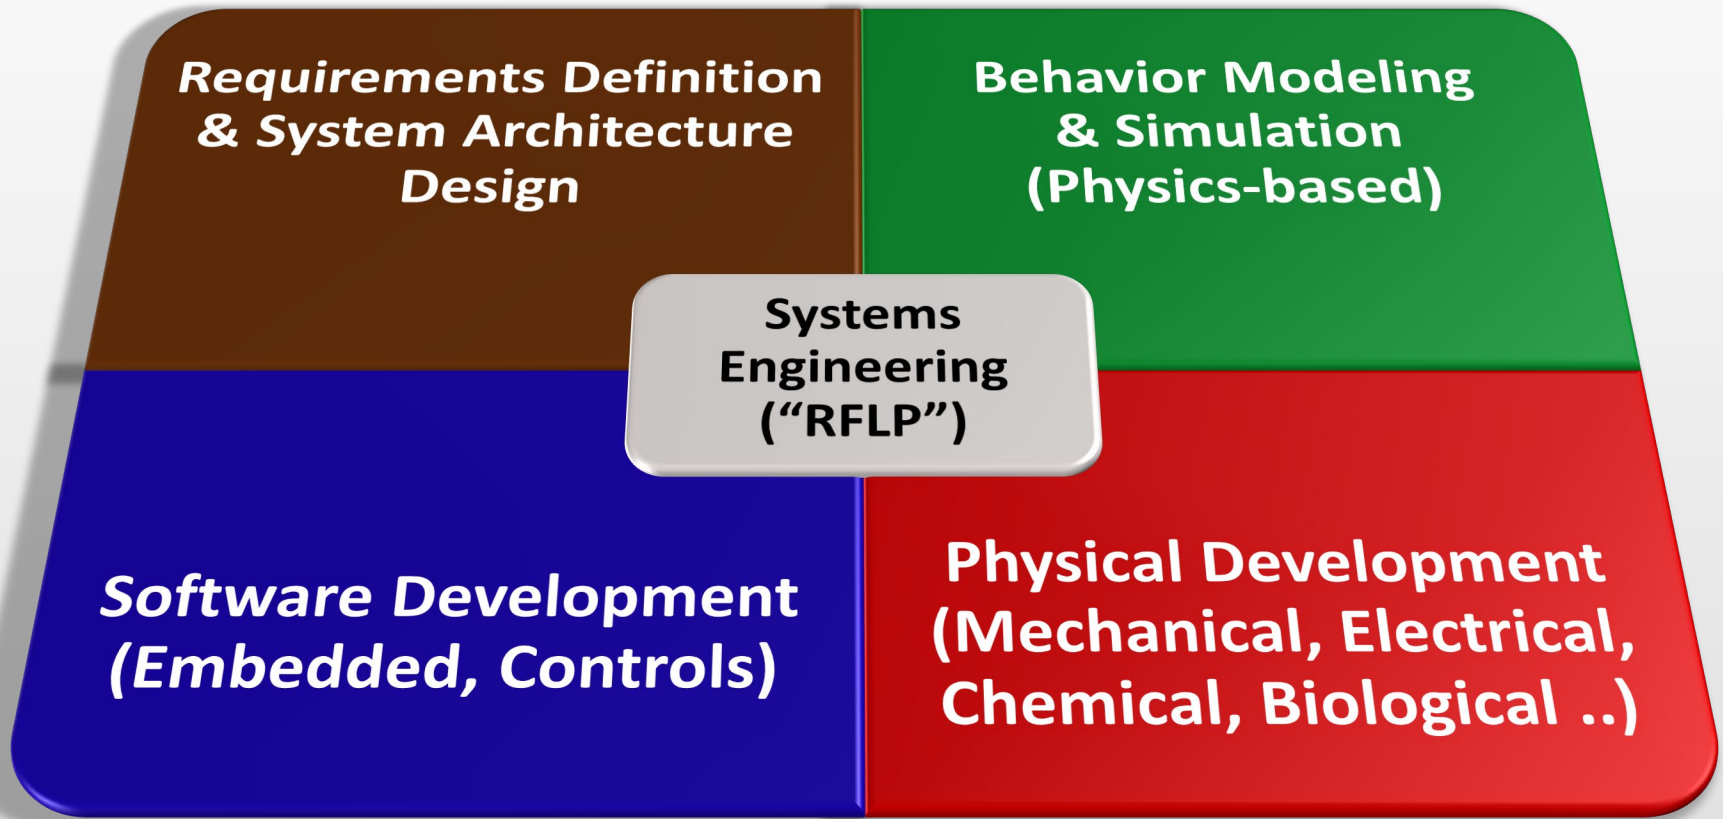

For 2018 (US\$ Millions) and 5-year compound annual growth rate (CAGR)

Segment	2018 Estimate	YoY Growth	5 Year CAGR
cPDM Comprehensive Technology Providers	\$6,164.07	6.4%	6.6%
cPDM-Focused Applications	\$2,387.49	7.2%	7.4%
Digital Manufacturing/Additive	\$828.40	8.7%	9.0%
SI/Reseller/VAR	\$7,478.24	6.6%	6.7%
Tools			
MCAD-Multi Discipline	\$3,985.35	5.2%	5.5%
MCAD-Design Focused	\$2,993.44	5.1%	5.2%
Non-Bundled CAM	\$1,452.49	6.2%	6.1%
Simulation & Analysis	\$6,173.07	8.1%	8.3%
Other Tools (e.g., SE, ALM)	\$1,494.86	7.6%	7.7%
EDA	\$9,764.57	7.1%	7.1%
AEC	\$3,925.25	9.5%	7.0%
Total	\$46,647.23	7%	6.9%

Estimates are US\$ (Millions)

Platforms are now consolidating across domains

PLM vendors acquiring MBSE, M&S, ALM, EDA & IoT technologies

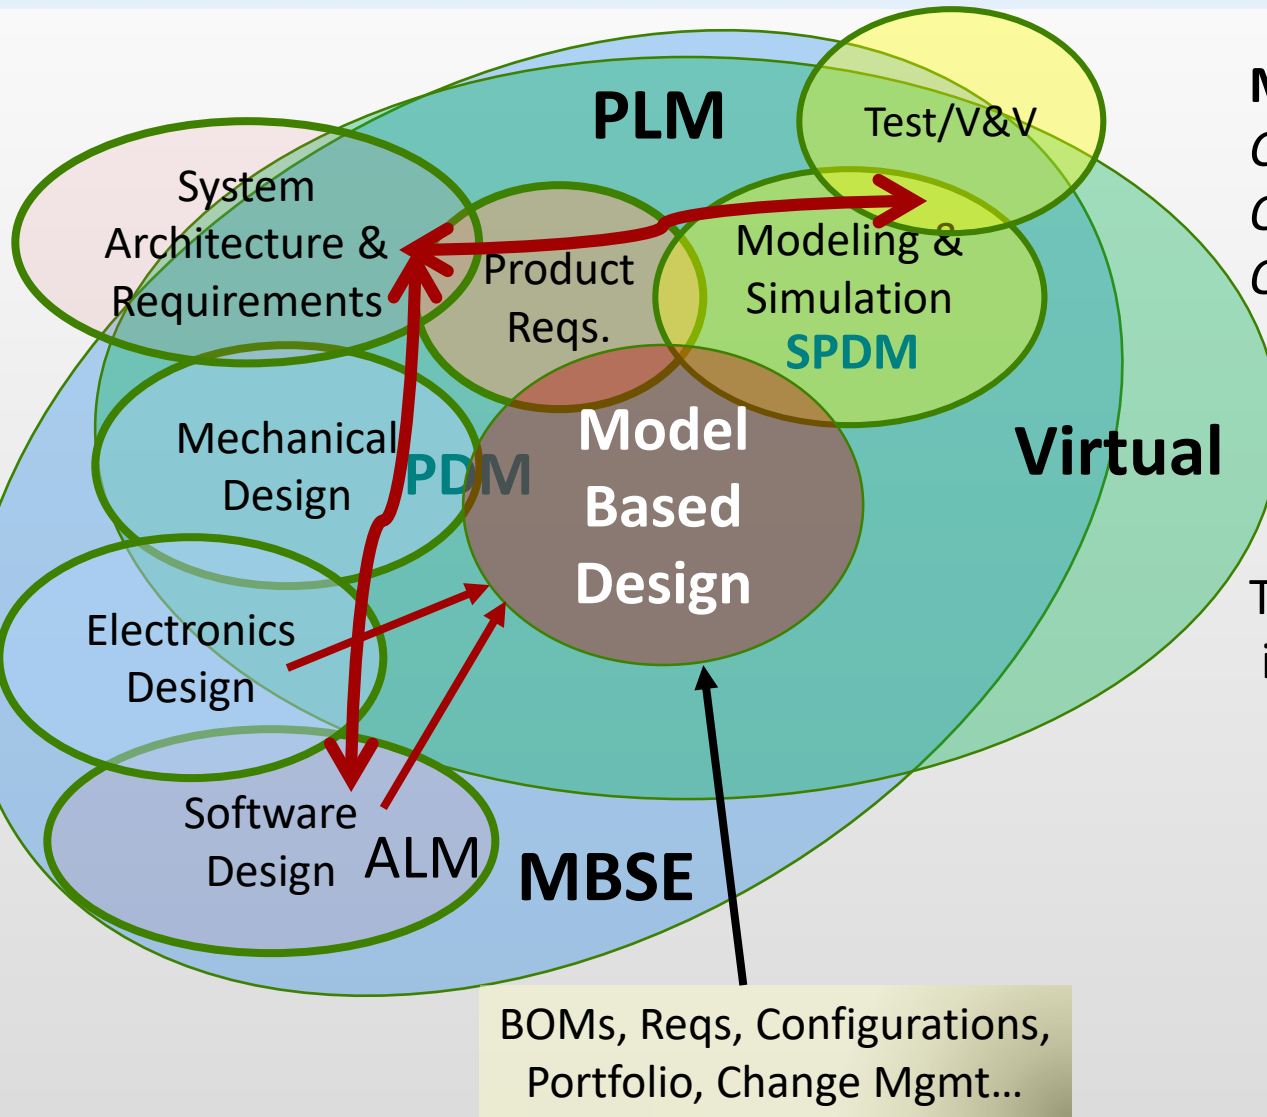

But still too way many tools in use for any single solution vendor to cover all the required disciplines

Sewing the MBSE Digital Thread ("To Be")

Conceptual Systems Engineering across domains; connections to PLM/M&S for V&V

MBSE Use Case:
*Conceptual Design,
Optimization and Validation
Of Cyber-Physical Systems*

The thread needs to connect information across domains:

- * Systems Architecture & Requirements
- * Software/ALM
- * EDA/ECAD/EBOM
- * MDA/MCAD/PDM
- * M&S/CAE/SPDM
- * Test/V&V/TDM

Challenge: Tool Integration, Data Interoperability

- If you pursued MBSE, would you start with a clean sheet in specific MBSE software, or would you write custom software to tie your existing models together? Why?
- *Majority indicated need to tie together existing models in some manner*

13% We have so many existing models, it would be impossible to tie them together across so many different modeling environments, so we need to do it clean sheet

22% The functionality available in clean sheet software would be really productive

14% Our use case for MBSE is very specific, I don't think it would be capture in off the shelf tools, so we'll be better off plugging our existing models together

39% We have so many existing models, the effort required to rebuild them in a clean sheet approach would be untenable

11% Other

MBSE Users: Standards Identified as Major Gap

Data from the 2016 GPDIS Workshop

Global Product Data Interoperability Summit | 2017

The MBSE GAPS

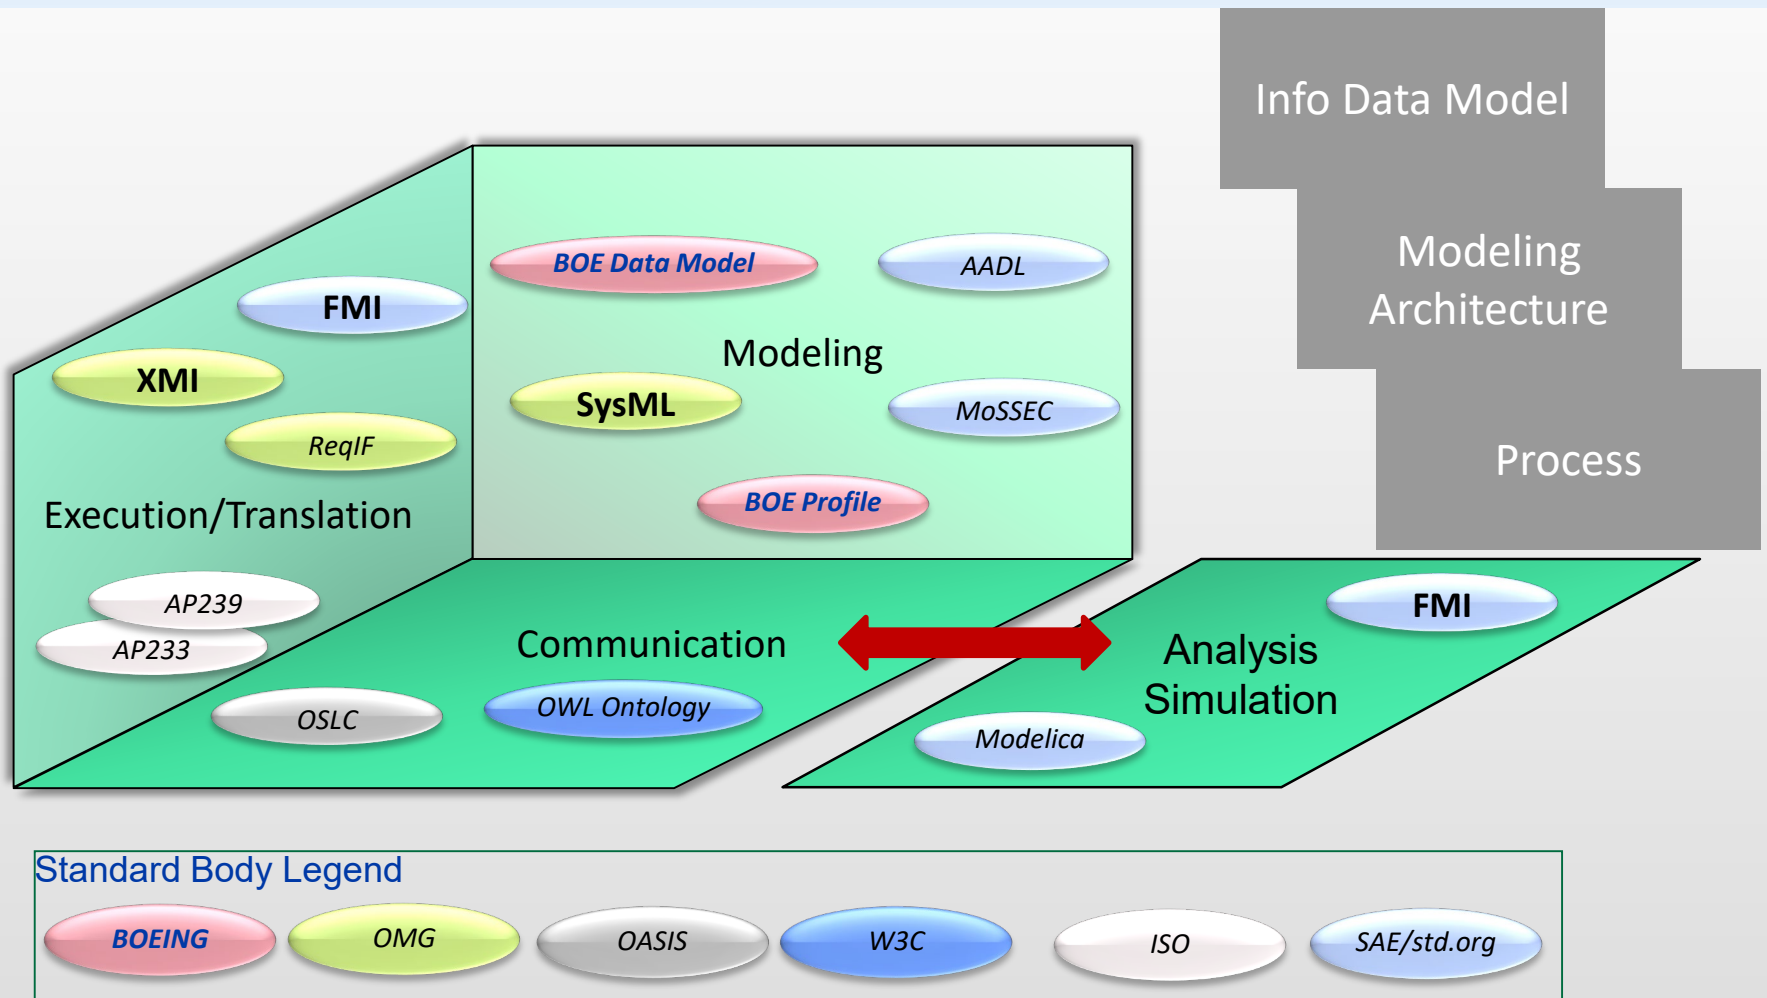

- Define/Justify MBSE
- Training-Implementation
- Integrate with PLM
- Standards - Interoperability
- Vocabulary
- Tool Integration (Vendors)
- Roadmap
- Modeling

“...just because you have a model doesn't mean you are model based...”

98 participants, 12 teams, 33 written submissions and 104 comments

High Impact Standards- Critical MBSE Enablers

Enabling the Digital Thread Vision for MBSE

Key technical enablers to achieve the MBSE Digital Thread

Many MBSE IW Sessions
that address these key
technical enablers

Monday, 1/28 9AM-12PM

Systems Modeling &
Simulation WG (SMSWG)

1PM-4PM Salon F

MBSE Digital Exchange
Mark Williams, Boeing

A word cloud of technical enablers for MBSE, including SysML, FMI/FMU, ProcessAI, Standards, Platforms, Semantics, and Ontology. The words are arranged in a diagonal pattern, with 'Standards' and 'Platforms' being the largest and most prominent. Other visible terms include ReqIF, AP2xx, OSLC, MoSSEC, owl, and xml.
