# Advancing In Silico Medicine at FDA

## Perspectives on Simulation in Medical Devices

**Tina Morrison, Ph.D.**

*Deputy Director, Division of Applied Mechanics*  
Office of Science and Engineering Laboratories  
Center for Devices and Radiological Health  
U.S. Food and Drug Administration

[Tina.Morrison@fda.hhs.gov](mailto:Tina.Morrison@fda.hhs.gov)

**28<sup>th</sup>** Annual **INCOSYMP**  
international symposium

Washington, DC, USA  
July 7 - 12, 2018

**July 10, 2018**

DISCLAIMER: The mention of commercial products, their sources, or their use in connection with material reported herein is not to be constructed as either an actual or implied endorsement of such products by the Department of Health and Human Services or the Food and Drug Administration.

# What you'll hear about today?

To fully realize the power of *simulation*, FDA has been

- advancing *in silico* medicine through *partnerships*
- establishing and implementing a statistical framework for incorporating data from *virtual patients* with real clinical data
  - 3 examples of *digital evidence* in place of *clinical evidence*
- developing mechanisms to determine the *credibility* needed for simulation in
  - research and development of medical products
  - regulatory decision-making
  - impacting the clinical care of patients

**“We want patients have access to high quality, safe, effective medical devices, of public health importance, first in the world.”**

**Jeff Shuren, Director, CDRH**

**Digital Evidence**

# Simulation Opportunities for Medical Devices

# Digital Evidence in Medical Device Submissions

M&S as scientific evidence  
to support marketing application

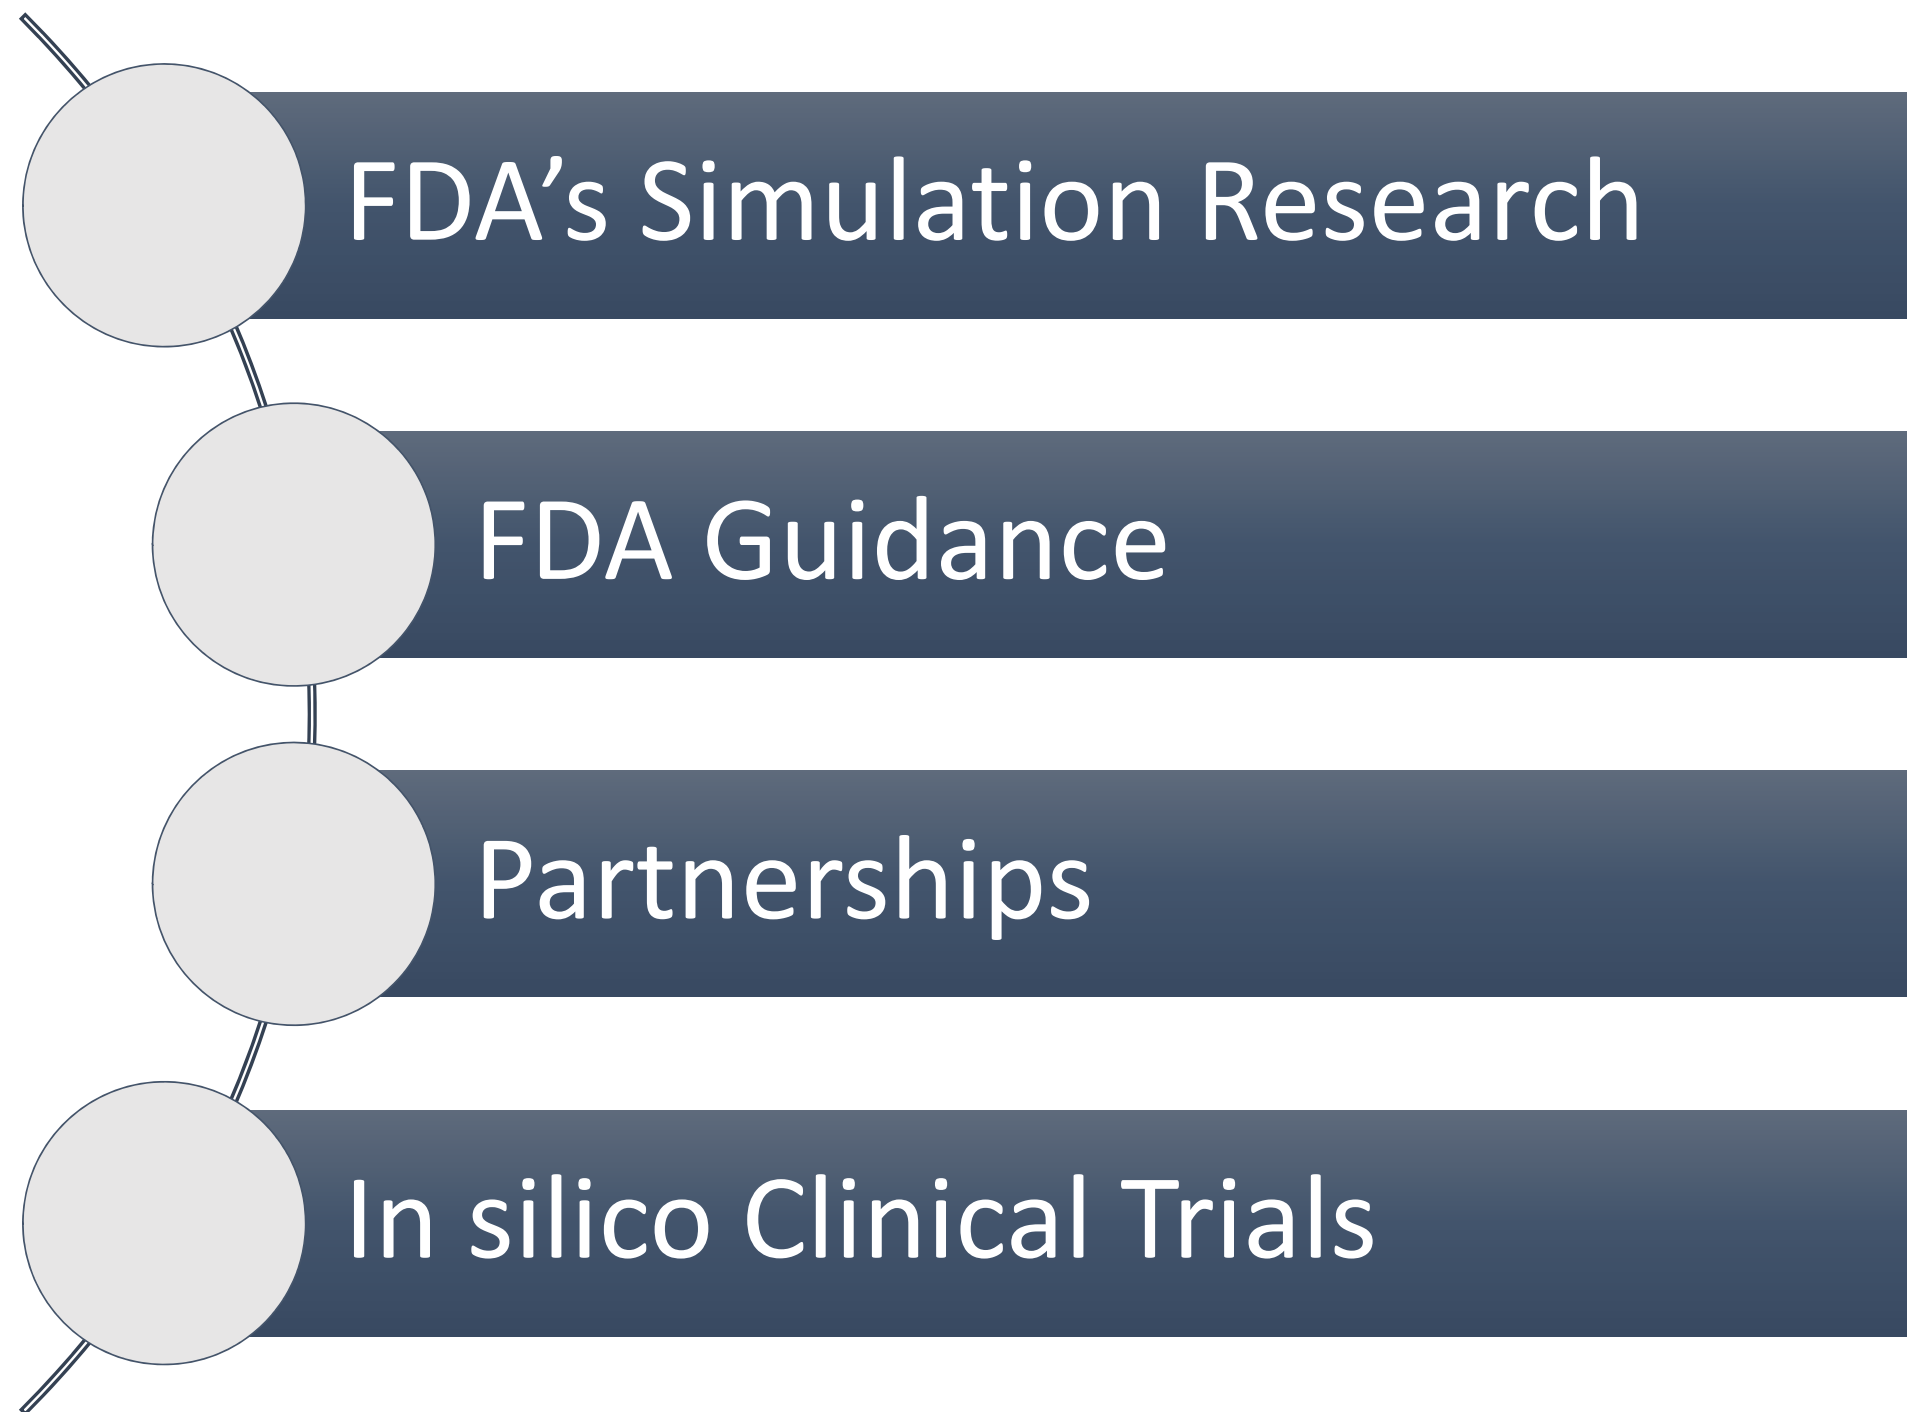

Bluestein, PLOS - 2012

M&S as a medical device

- FDA-led Guidance on “**Software as a Medical Device**” can be found through IMDRF: International Medical Device Regulators Forum
  - <http://www.imdrf.org/workitems/wi-samd.asp>
- Many initiatives have focused on modeling and simulation as **scientific evidence**.
  - Article on “The Role of M&S in the TPLC of Medical Devices”, Morrison *et al*, J Med Dev 2017 details more specifics

# FDA's Approach for Advancing *In Silico* Medicine

# The Office of Science and Engineering Laboratories

- CDRH's research arm support's the assessment of the enormous breadth of devices that the Center regulates
  - from MRI scanners and neural stimulation devices to pacemakers, cancer treatments and other lifesaving products.
- Score of highly experienced scientists in a broad range of fields and disciplines

***OSEL has more than 3 dozen research projects involving computational modeling***

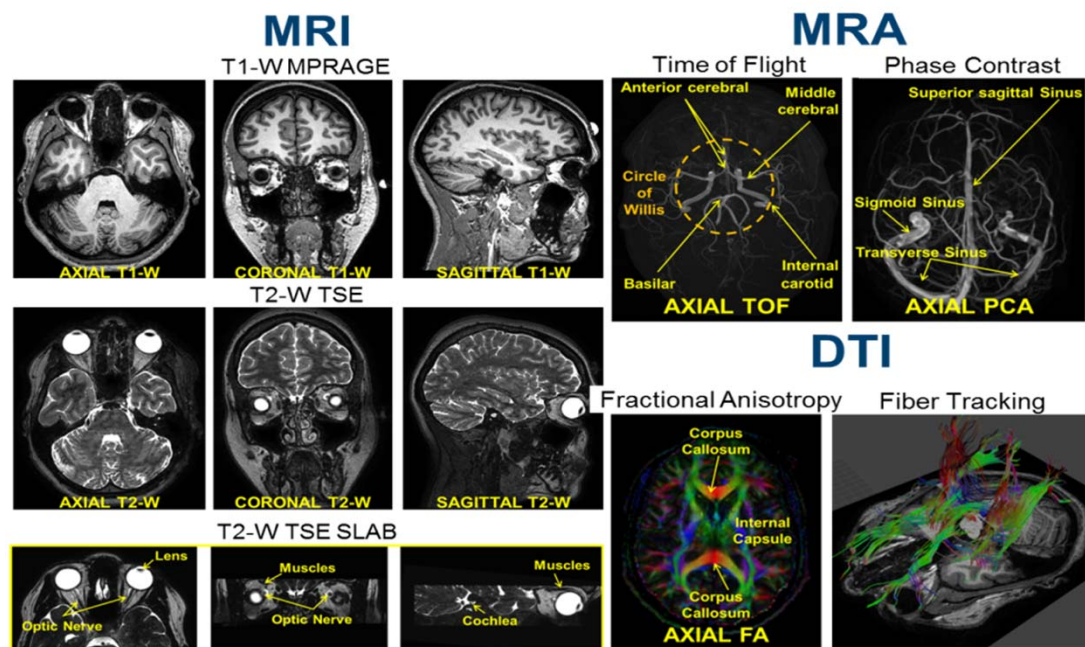

# Multimodal Imaging Based Detailed Anatomical Model

FDA's  
Simulation  
Research

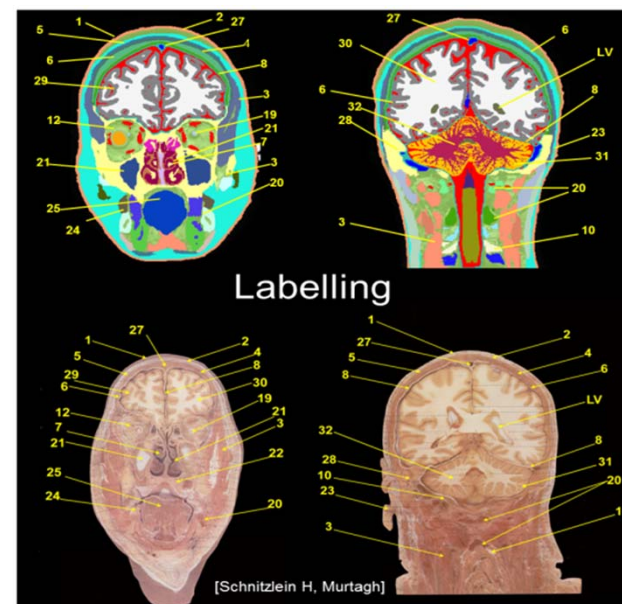

Open access model of the head and neck with 200+ structures

- FDA in collaboration with IT'IS Zurich, Medical University Vienna, Mass Gen & Harvard Medical
- 160 model downloads; 8500 views; 32 independent citations

## 1. Multimodal Data Acquisition

## 2. Segmentation

## 3. Mesh Generation & Simulations

# Physiological Closed-loop Control (PCLC) Medical Devices

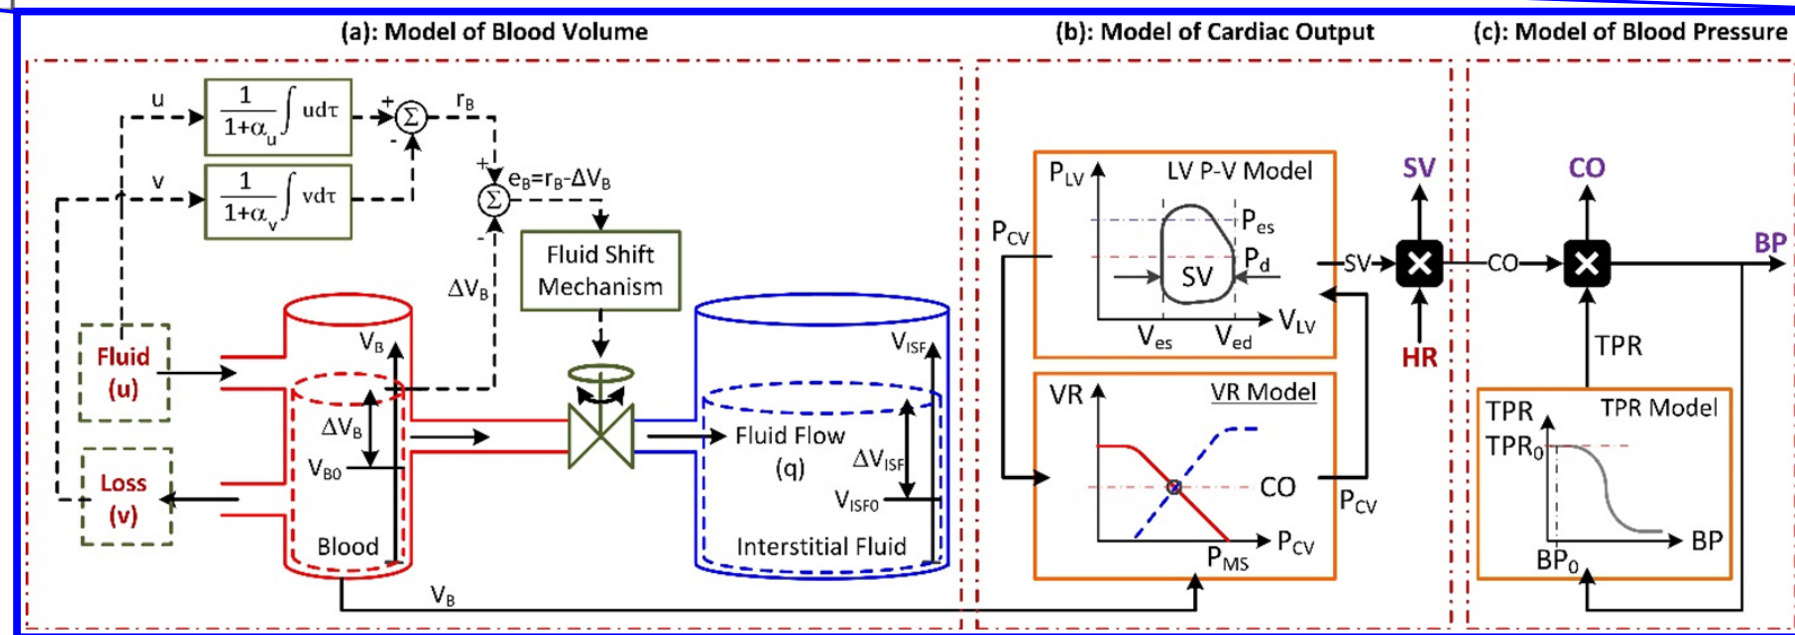

FDA's  
Simulation  
Research

## Development & Validation of a Computational Patient Model

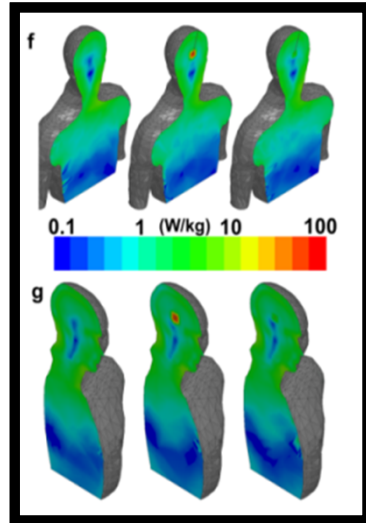

- To leverage computational modeling for the design and evaluation of PCLC devices, a validated patient model for a specific context of use is needed.
- Harness model-based engineering for complete *in silico* evaluation

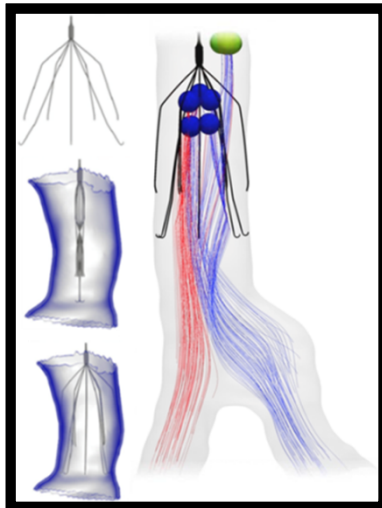

doi: 10.1115/1.40338330

# Dozens of Research Efforts at CDRH with Simulation

Serano et al.

Craven et al

Benchmarks for Computational Fluid Dynamics	Computational Risk Assessment
Computational Patient Models for Closed-Loop Medical Devices	Assessing the Trustworthiness of Models via frameworks, metrics, standards
Virtual Clinical Trials for Imaging Systems	Dynamics of Cardiac Fibrillation
Simulations of Electrocardiogram	Biomarkers for Allergic Risks
Deformation of Bioprosthetic Aortic Valves	In silico Breast Phantoms
Patient-specific Modeling of IVC Filters	Lesion Insertion into Clinical Images
RF Coils for MRI Machines	Ultrasound Enhanced Drug Delivery
Constitutive Model for Absorbable Materials	Aerosol Leakage of Respirators
Multimodal Imaging-Based Model of the Whole Body Models and Human Head and Neck	Ganglion Cell Model for Epiretinal Electrode Stimulation
HIFU Simulator	Electromagnetic Exposure Maps
Fretting of Total Hip Arthroplasty	Spinal Implants for Pediatric Population

# FDA Final Guidance

## FDA Guidance

### Reporting on Computational Modeling Studies in Medical Device Submissions – September 21, 2016

- FDA training slides on guidance and ASME V&V40 Standard:  
<https://doi.org/10.6084/m9.figshare.5018783.v1>

#### Reporting of Computational Modeling Studies in Medical Device Submissions

#### Guidance for Industry and Food and Drug Administration Staff

Document issued on: September 21, 2016.

The draft of this document was issued on January 17, 2014.

For questions about this document, contact Tina M. Morrison, Ph.D., Division of Applied Mechanics, Office of Science and Engineering Laboratories, (301) 796-6310, [tina.morrison@fda.hhs.gov](mailto:tina.morrison@fda.hhs.gov).

U.S. Department of Health and Human Services  
Food and Drug Administration

Office of Device Evaluation  
Office of Science and Engineering Laboratories

#### Table of Contents

- Introduction
- Scope
- Outline of Computational Modeling Report
  - 15 components
- Glossary
- Five subject matter appendices
  - Fluid Dynamics and Mass Transport
  - Solid Mechanics
  - Electromagnetics and Optics
  - Ultrasound
  - Heat Transfer

# Partnerships

BMES.org

## Medical Device Special Interest Group (SIG)

- Yearly conference in Washington DC Area focused on advancing simulation of medical devices.

Abstracts: <https://link.springer.com/article/10.1007/s10439-016-1710-7/fulltext.html>

### 2019 Conference: The Role of *Digital Evidence* to Support Personalized Patient Healthcare.

### Goals of Medical Devices SIG

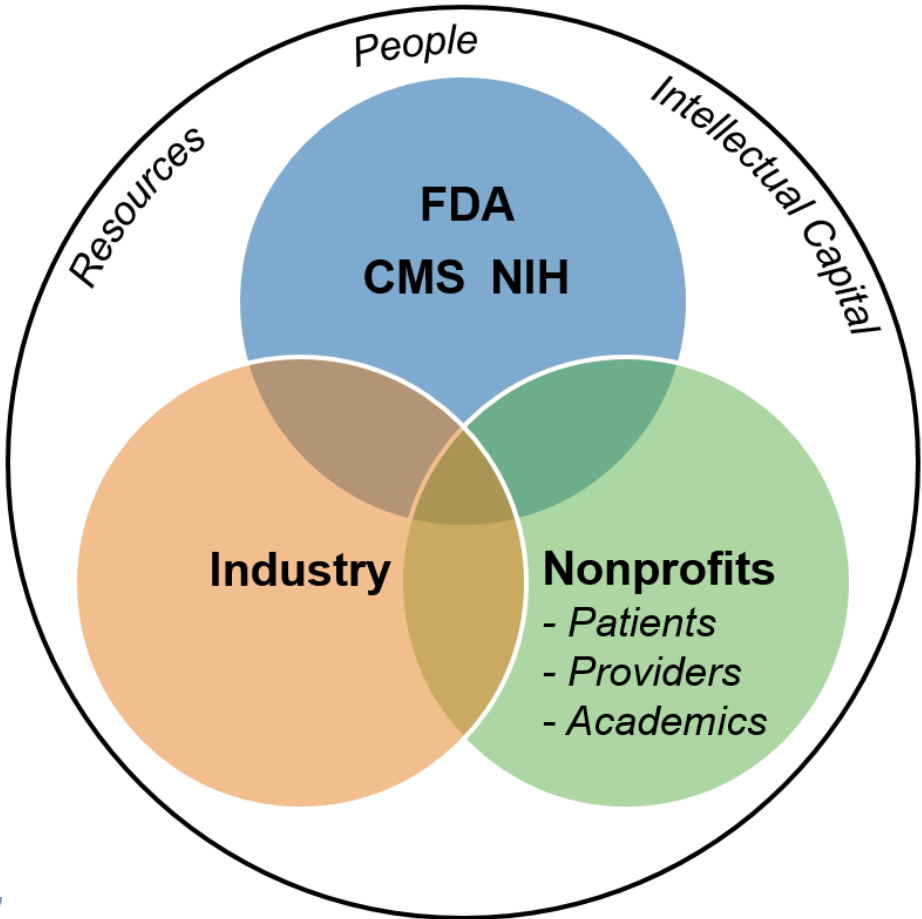

- Provide opportunities for rich, meaningful collaborations between partners working in academia, government, industry, and the clinic.
- Build a strong community of students and professionals interested in creating safe and effective medical devices.
- Serve as a mechanism for best practice sharing and professional development in the areas of design, manufacturing, quality, and regulatory.

# Partnerships

Medical Device Innovation Consortium, a 501(c)3 - Public-Private Partnership collaborating on Regulatory Science

- o to make patient access to new medical device technologies faster, safer, and more cost-efficient

Access to safe and effective medical device technology through Regulatory Grade computer models & simulations

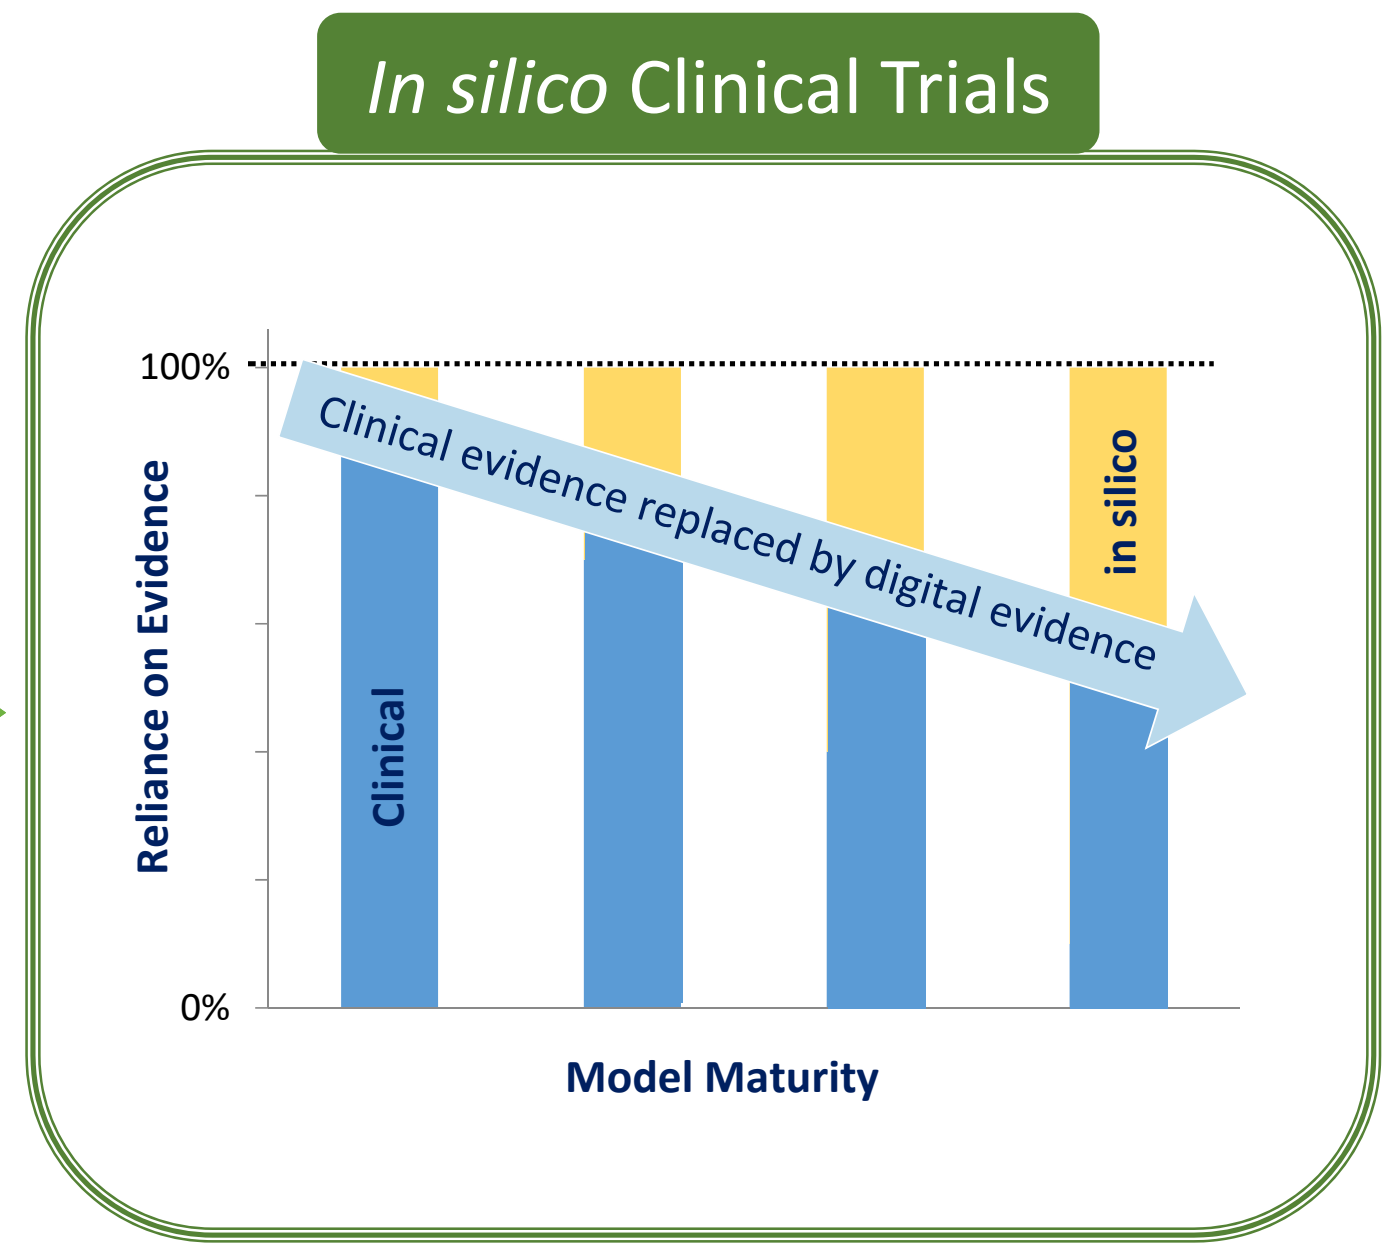

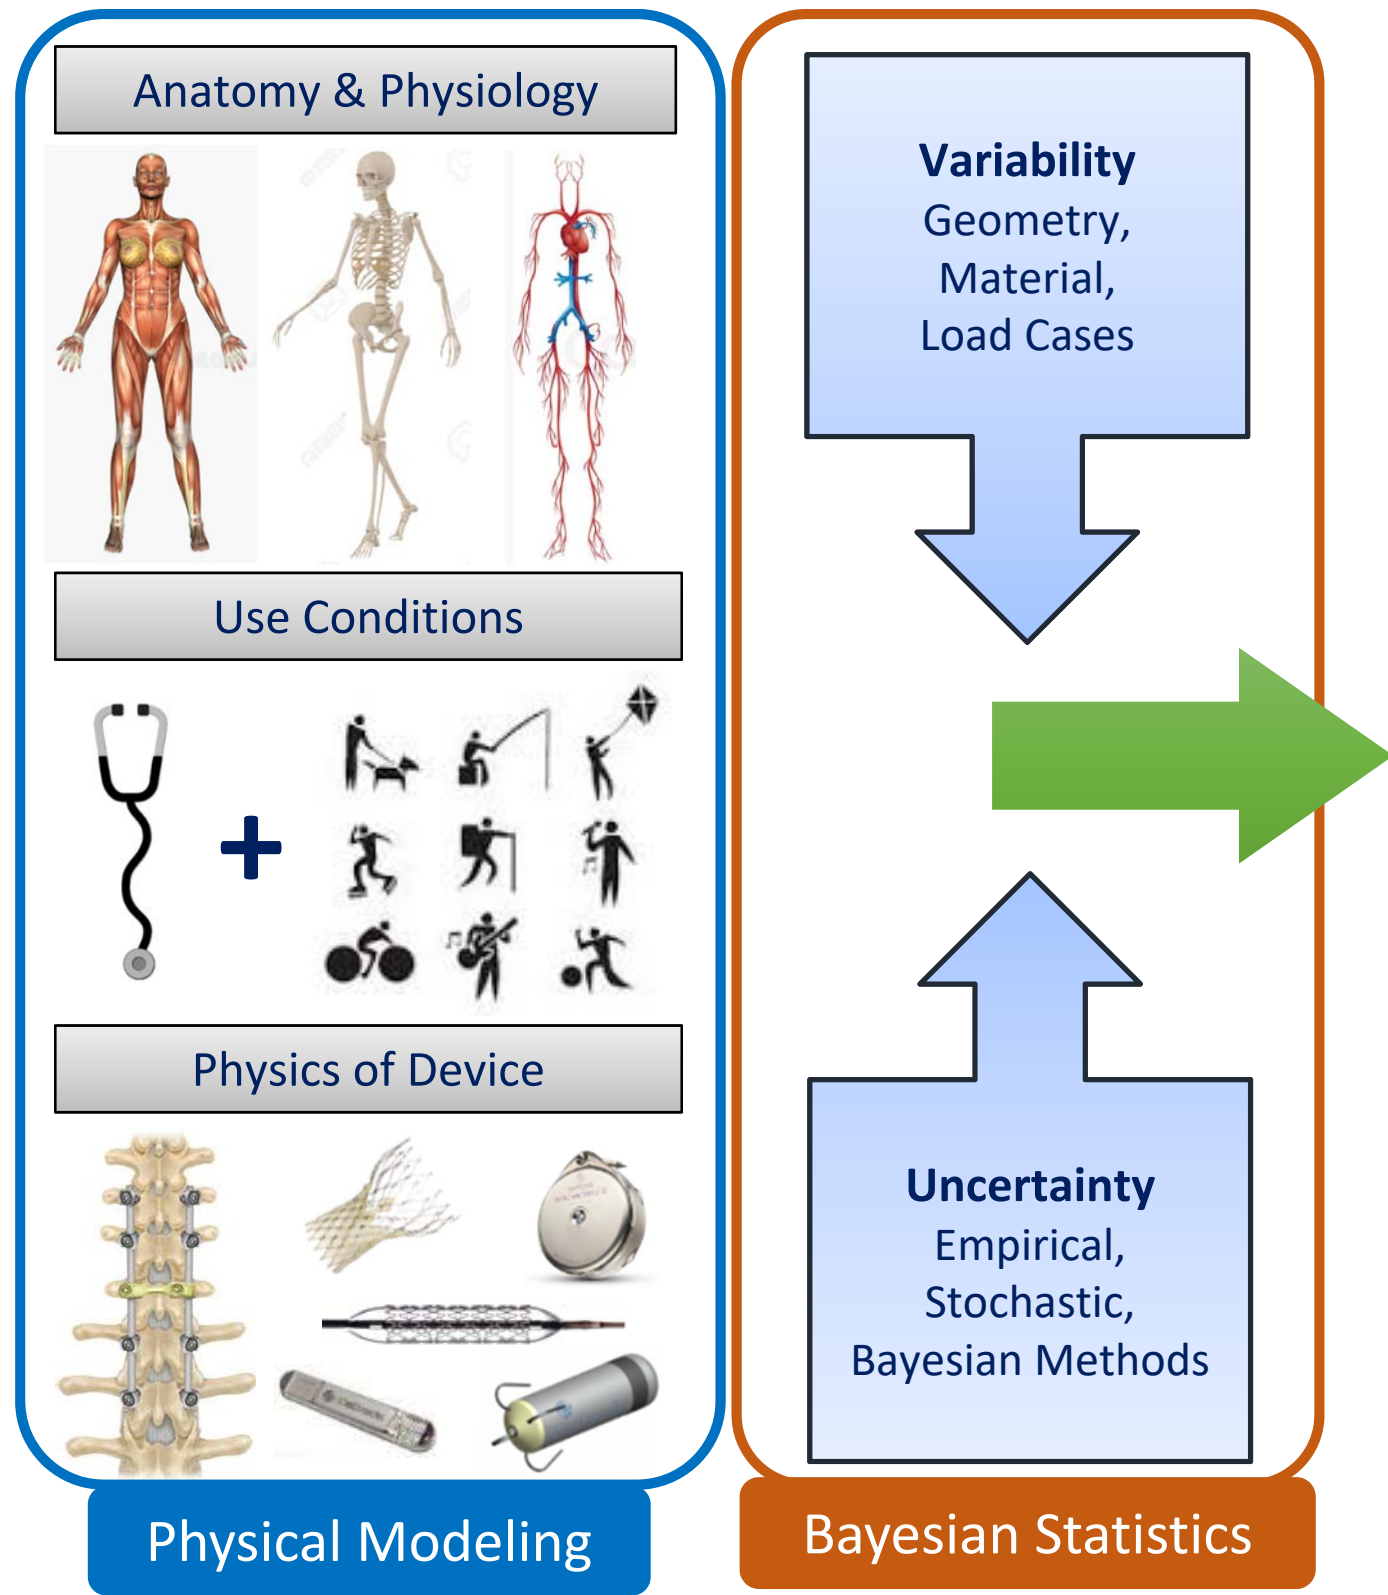

# State of *Digital Evidence* in Medical Devices

# Concept of “*In Silico* Clinical Trials”

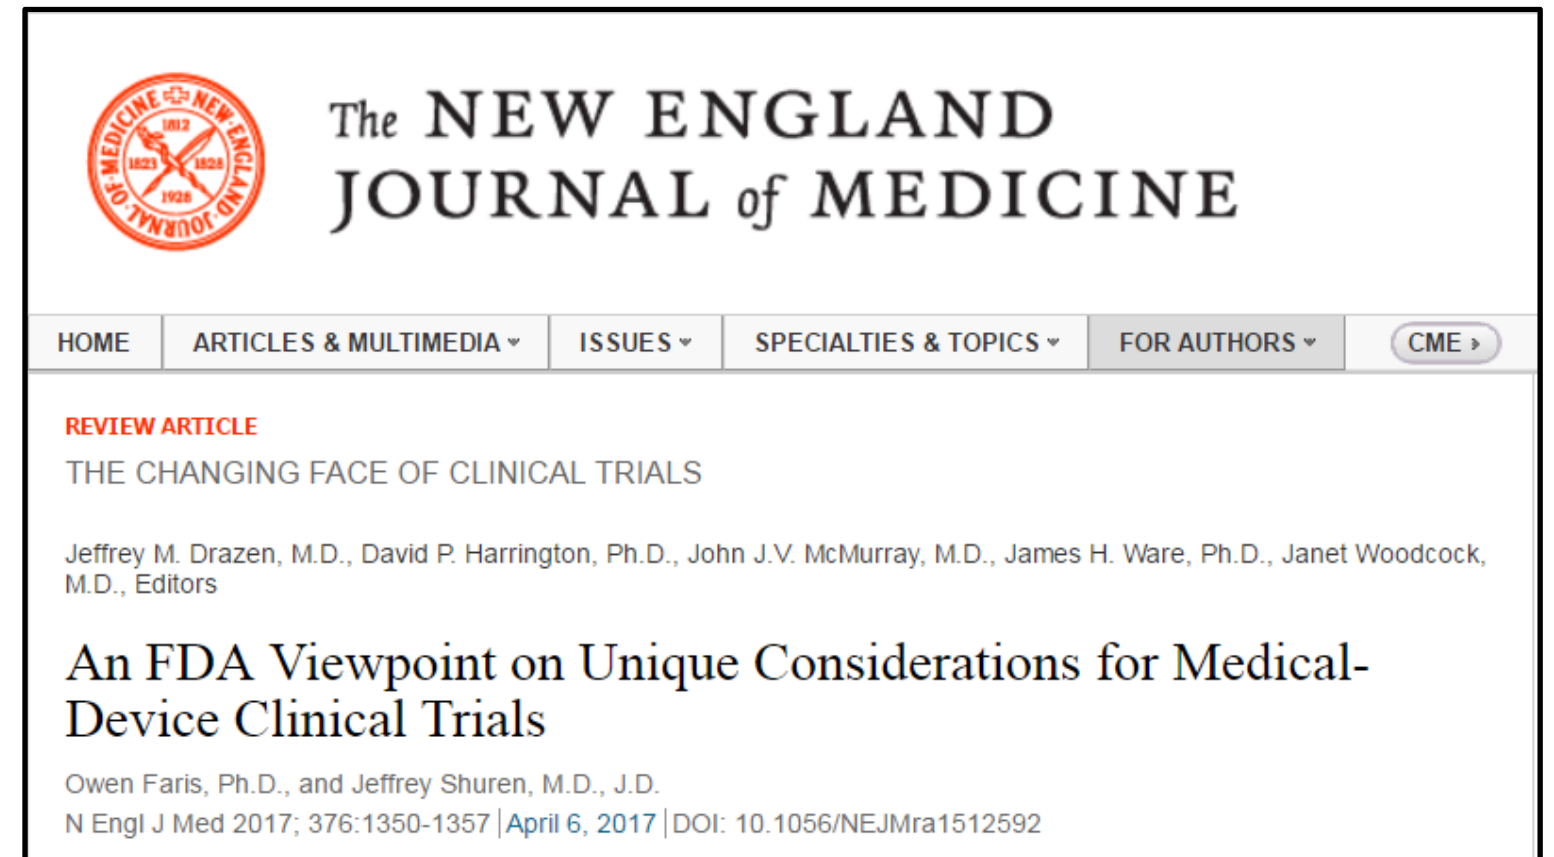

Haddad, et.al., *Reliability Engineering and System Safety*, 123 (2014)

Modified: Original by Mark Palmer, Medtronic, Inc.

# CDRH Support for “Virtual Patients”

*“If it can be shown that these **virtual patients** are similar, in a precisely defined way, to real patients, future trials may be able to rely partially on virtual-patient information, thus lessening the burden of enrolling additional real patients.”*

The screenshot shows the homepage of The New England Journal of Medicine. The logo is on the left, and the title 'The NEW ENGLAND JOURNAL of MEDICINE' is on the right. Below the title is a navigation bar with links for HOME, ARTICLES & MULTIMEDIA, ISSUES, SPECIALTIES & TOPICS, FOR AUTHORS, and CME. The main content area features a 'REVIEW ARTICLE' section with the title 'THE CHANGING FACE OF CLINICAL TRIALS' and a list of editors. Below this is a featured article titled 'An FDA Viewpoint on Unique Considerations for Medical-Device Clinical Trials' by Owen Faris, Ph.D., and Jeffrey Shuren, M.D., J.D., published in N Engl J Med 2017; 376:1350-1357 | April 6, 2017 | DOI: 10.1056/NEJMra1512592.

*“In the future, **computer-based modeling** may change the way we think about device validation in other ways, allowing for much smaller clinical trials, or may change the way we think about running trials, in that some “clinical” information may be derived from simulations.”*

# Digital Evidence in place of Clinical Evidence

INDUSTRY EXAMPLE – Courtesy of Medtronic, Inc.

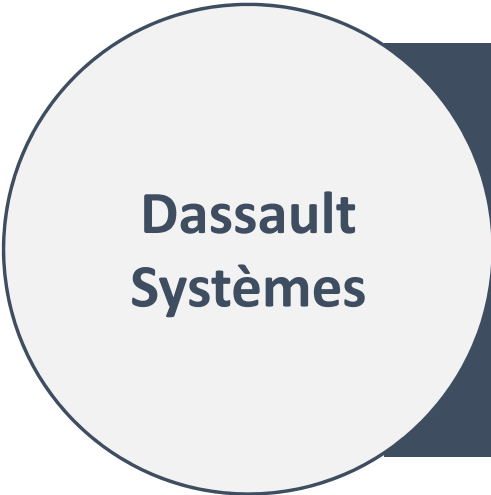

## In Vivo Model Validation

- Advisa SR pacemaker approved with digital evidence
- No clinical trial required for MRI

# Partnerships

The *Living Heart Project* from Virtual Human Simulation Group

- Large collaboration with researchers, medical industry, regulators and clinicians
  - FDA is a formal partner with D.S. via research collaborative agreement

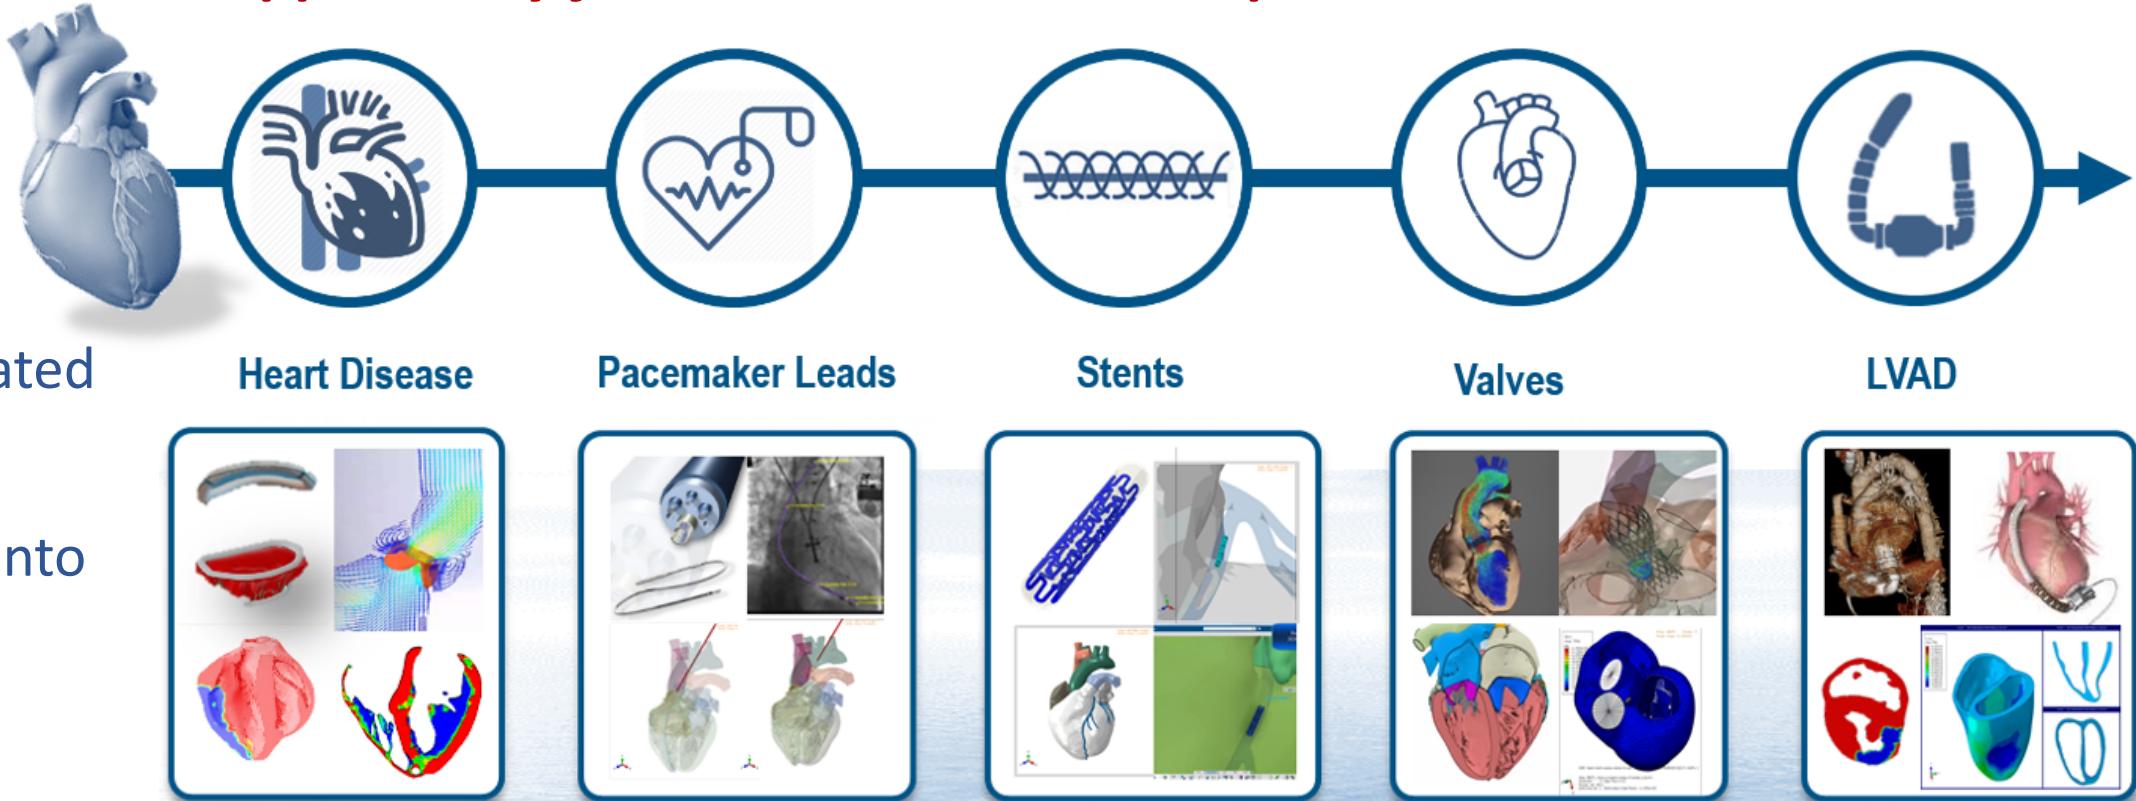

Mission:

Advance the development of safe & effective cardiovascular products and treatments by

- **Uniting** engineering, scientific, & biomedical experts to deliver validated models and
- **Translating** simulation technology into improved patient care.

**Living Heart Applications: Virtual Design & Testing of Cardiovascular Devices**

*Opportunity for medical devices and pharmaceuticals*

# Partnerships

What is the “bar” for digital evidence?

- o FDA training slides on guidance and ASME V&V40 Standard:  
<https://doi.org/10.6084/m9.figshare.5018783.v1>

## ASME Verification & Validation Committee

**CHARTER** Coordinate, promote, and foster the development of standards that provide procedures for assessing and quantifying the accuracy and credibility of computational models and simulations.

# ASME V&V 40 Standard

**Credibility:** the trust, obtained through the collection of evidence, in the predictive capability of a computational model for a context of use

- Focus is on **HOW MUCH** V&V is necessary to support using a computational model for a context of use.
  - should be commensurate with model risk; the concept of “model risk” has been also been used by NASA<sup>1</sup>.

ASME V&V 40-2018

**Assessing Credibility of Computational Models through Verification and Validation: Application to Medical Devices**

**Summer 2018!**

AN AMERICAN NATIONAL STANDARD

# Continuously Improve Product and Production in the Real World

## Closing comments

- ***Digital evidence*** is being used at CDRH to support regulatory submissions
- With the appropriate level of ***credibility***, digital evidence can reduce the burden on physical testing and *in vivo* studies, saving both animals and patients
  - 3 examples of digital evidence in place of clinical evidence
  - 4<sup>th</sup> example underway with Dassault Systèmes

### ***Partnerships are key!***

- Need to raise awareness to different communities, especially those unfamiliar with simulation, for broader adoption.
