

Next Generation
Systems Modeling Language

SysML V2

IBM Plans

First General Availability planned for 2024:

- Already involved with pre-GA activities for modeling experimentation based on SysML V2 (under NDA)

In Collaboration with Siemens

- IBM SysML V2 solution integrated with Siemens Xcelerator portfolio
- Leveraging tool openness, APIs and extensibility

IBM focus

- Needs of Systems Engineers
- SysML V2 modeling in the context of the larger development lifecycle via a Digital Thread integration framework
- Transition to Software Design via SysML to UML interoperability

Next Generation
Systems Modeling Language

IBM SysML V2 Modeling

Key Capabilities

Fully compliant with **SysML V2**

Full compliance with textual and graphical notations

Support for the standard Rest APIs

Support for standard Model libraries

SysML V1 to V2 transformations

Model interchange

Low barriers to adoption

Easy on-boarding

Modern UX

UI Automation/Extension

Automation support for **IBM Harmony for SysML V2**

Support for **full lifecycle digital thread** thru OSLC linking and Global-Config

SysML V2 integrated with the rest of the development lifecycle

Path to **downstream design domains**

SW design in Rhapsody

Mechanical & Electrical designs (via collaboration with Siemens)
